HOMEOWNER CHECKLIST

The day of the installation is a big day indeed! We've provided some valuable information below to help this process go smoothly. Please review it again a few days before the installation. If you have any questions at all, please call us!

1) Mow your grass:

There are several thousand nails holding up your existing roof. We pride ourselves in picking up 99% of all roof-related debris. We use large magnets to pick up the old nails. However, if the grass is taller than the wheels on the magnets, we won't be able to reach all of the nails. Please have your grass cut as short as possible to help us get all of that debris out of there.

2) Take care of satellite dishes.

Please call your satellite provider if your dish is attached to the roof. Our team will remove the dish and put it back where it was, but we do not have specialized equipment to fully calibrate the system. Ask to have the dish placed on a ground pole to eliminate the possibility of leaking from the dish's screws.

3) Keep the dozen rule in mind.

If you find more than 12 nails after we are gone please call us!

We will be happy to come and clean again. In fact, if anything at all is out of place, we are happy to move it. We strive to satisfy our customers at every step. The last step is just as important as the first!

4) Protect items in the attic.

Often, we're installing a brand new ridge vent system. This generates sawdust, and much of it will find its way into the attic. It will not hurt your insulation or anything else, but it may cover some of your personal belongings with dust. We recommend covering them with old blankets or tarps before installation day. If your garage does not have a ceiling and the roofing rafters are exposed, inform us ASAP!

5) Move breakables away from the house.

This could mean potted plants, grills, patio tables, ornamental lighting, and a host of other things. We will be removing four to nine tons of old material. We don't want any valuables to be damaged in the process.

6) Clear your driveway.

If it's possible for you to park on the street, please do. Cars are likely the most valuable property you have that sits outside your home. Also, you may need to run to the store or go to work! Our crews typically arrive right at sunup. They prefer to park as close to the house as possible so that they can throw debris directly into the trailer.

7) Do not walk through any doorway where work is being performed.

Things fall — hammers, shingles, metal drip edge, etc. When you open the door, try to make visual contact with a team member to confirm you are safe to walk out of your home.
